Abstract:

PURPOSE: To obtain the present composition, consisting of specific ferroelectric chiral smectic Y liquid crystal compounds and capable of displaying half tone and providing a liquid crystal element having extremely high rate of response.

CONSTITUTION: The objective composition consisting of two or more compounds selected from the group of ferroelectric chiral smectic Y liquid crystal compounds expressed by formulas I-WVII, etc. For example, three-color display can be carried out as follows, black, orange and blue in use as a display element of 6μm cell gap and black, violet and yellowish green in use as a display element of 5μm cell gap.
